

# SEAL

0310

## DESCRIPTION:

The SEAL toy was designed as a water attraction for the youngest water fun enthusiasts. The possibility of choosing the color version allows for the perfect integration of this attraction into the interior of the facility. Our water attractions automatically spray water, and in the option with a hand pump, children can independently squirt water from the attraction. SEAL will make the time more pleasant and stimulate the imagination of the youngest users of swimming pool complexes. Thanks to the installed water pump (additional option), the toy encourages active play, also with parents. It is a great addition to the equipment of toddler pools while maintaining all safety rules.
