

	Space Bowl D=6500 Inlet Ø 800 dextrogyrate	Bowl's Diameter	6500	[mm]
		Pump Efficiency	120+25	[m³/h]
		Inlet's Optimal Length	20-30	[m]
		Average Inlet's Slope	13-15	[%]

An untypical slide of a specific structure: created for aqua parks. The whole slide is divided in three stages: 1/ gathering speed stage in the relatively long and steep section, which is made of 800 mm tube; 2/ repeated centrifugal rotation in the onion-shaped bowl; 3/ free fall to the pool below or, alternatively, end of slide at the tube stage. Similar to its bigger counterpart Space Bowl 6500, it is possible to combine it with the other slide or pool.
