

	<p>Space Bowl D=8800 with outlet Inlet \varnothing 800, Outlet \varnothing 1000 dextrogyrate and laevorotatory</p>	Bowl's Diameter	8800	[mm]
		Pump Efficiency	120+25	[m ³ /h]
		Inlet's and Outlet's Optimal Length	Inlet 20-30, Outlet 10	[m]
		Average Inlet's and Outlet's Slope	Inlet 13-15, Outlet 10	[%]

This is a structure, which only to a small degree resembles the standard slides and because of that, it attracts attention. The users during the slide are thrilled and when the tube slides up, they hit a huge funnel in which they are spinning around the outlet located in the centre of 'the onion' and to finally slide downwards to the outlet. An additional attraction of this structure is the possibility of connection the outlet with another slide making it even more attractive. In case of Space Bowl 8800, the size of a bowl makes the time of being inside the bowl longer and consequently makes the fun last longer.
